

Future Proof, Open-Source Dynamic Checkweighing Family Now Shipping

Designed for Seamless Integration and built with Off-the-Shelf components, Hardy's Dynamic Series of checkweighing machinery was designed using controls based on a Rockwell Automation's CompactLogix platform, providing a standardized open source architecture that is flexible enough to meet both current and future control needs. [View the YouTube Video](#)

The Dynamic Checkweigher is a fully automated system designed to weigh items in-motion. The Checkweigher controller can communicate both upstream and downstream across the Connected Enterprise.
